

# How

## are bike frames painted?

### 01 COLLABORATE

After filling out a custom paint form for your bike and emailing us, we will contact you to get any details needed. Once all information is submitted we send out an estimate and your work can be scheduled.

### 02 INSPECTION

Your frame will go through an inspection to be sure there is unnoticed damage. If damage is found, we contact you before moving forward.

### 03 PAINT PREP

Your frame is thoroughly cleaned for painting. All chips and scratches are removed from the old paint. Then your frame is hand sanded to prepare it for primer. You can choose either 'Standard' or 'Weight Weenie' prep, this will determine the amount of old paint removal. This ranges from only logo and graphic removal to complete paint removal back down to carbon.

### 04 PAINT

Your design is painted on the frame using a high quality automotive base coat/clear coat paint system.

### 05 DETAIL

Once painted, your frame is then polished and detailed and then packaged for shipping.

VELONTIC  
CARBON FRAME REPAIR & CUSTOM PAINT
