

Care

for your new gloss paint

01 CLEANING

For at least 4 weeks after painting use mild soap and a microfiber cloth to wash your bike. Do not use high pressure water or pressure washers.

02 PROTECTION

For at least 2 months after painting, use only breathable waxes to protect your frame. We recommend Fast Wax by Presta®. After this time period, you can use a traditional wax.

03 POLISH

Minor scratches and scuffs can be polished out by wet sanding the area with 1500-2000 grit, and then using polishing compound to restore luster.

04 TOUCH UP

Deep scratches and chips can be most easily touched up with similar color nail polish and then covered with clear nail polish. For the exact frame colors, touch up paint can also be purchased with Velontic.

 **VELONTIC**
CARBON FRAME REPAIR & CUSTOM PAINT

Thanks so much for letting us paint your frame. If you need us for more custom paint work or carbon repair, we will be here for you.
