

Care

for your new matte paint

01 CLEANING

For at least 4 weeks after painting use a mild matte finish soap and matte finish wash cloth to gently wash your bike. Do not use high pressure water or pressure washers. Excessive force or the wrong products will cause the finish to lose its sheen over time.

02 PROTECTION

Do not use any waxes on your frames finish for 2 months after painting. If you choose to wax your frame after this time, use one made for matte finishes. Clear matte finished films can be applied to protect against chips, scratches, and wear.

03 MAINTAINING YOUR FINISH

Matte finishes can lose their consistent sheen by handling. To keep your finish consistent handle the frame as little as possible. Use your bars, stem, seat, etc. to handle and move your bike around.

04 TOUCH UP

Deep scratches and chips can be easily touched up with similar color nail polish and then covered with a matte clear nail polish. For the exact frame colors, touch up paint can also be purchased with Velontic.

VELONTIC
CARBON FRAME REPAIR & CUSTOM PAINT

Thanks so much for letting us paint your frame. If you need us for more custom paint work or carbon repair, we will be here for you.

www.velontic.com

Please feel free to share your photos with us. We would love to see your bike after it has been built up, or you riding on your new paint work!
